

Moab

Can I mix Moab and TORQUE versions?

Issue: Can I mix Moab and TORQUE versions?

Solution:

The short answer to this question is yes. Moab communicates with TORQUE over an API that has stayed fairly unchanged over major releases. With that said we only recommend that you run code no older than 1 revision behind. In the case of major releases we recommend that you not stay on older versions.

Keep in mind that our products do have a EOL (End of Life) and EOSL (End of Support Life). This table can be viewed at the following link.

<http://www.adaptivecomputing.com/eol-policy/>

Example:

For example you could run the following setup with the understanding that you should upgrade TORQUE to 6.0. Adaptive Computing will support you over the upgrade period.

Moab 9.0 over TORQUE 5.1.x

Although it is possible to run older versions under Moab it would not be recommended or supported.

Moab 9.0 over TORQUE 4.x.
