How can I create a reservation to prevent jobs from running with a specific job attribute?

Question:

How can I create a reservation to prevent jobs from running with a specific job attribute?

Solution:

Reservations support a JOBATTRLIST both in a STRCFG and via mrsvctl.

Example:

```
SRCFG[stopattr] JOBATTRLIST=!project,!hsk
```

Or on a command line

```
mrsvctl -c -t ALL -a jattr='!sysp'  
mrsvctl -c -t ALL -a jattr='!project'
```

Your escape sequence might be different due to the shell you use.
