Moab

How do we calculate Average Utilized Procs and Average Utilized Memory in showstats?

Average Utilized Procs is calculated as:

J->PSUtilized / J->AWallTime

Average Utilized Memory is calculated as:

J->MSUtilized / J->AWallTime

Internal definitions:

```
  double PSUtilized;      /**< procseconds utilized by job           */
  double MSUtilized;      # Not defined in the code, but by comparison should be
memoryseconds utilized by job
  long   AWallTime;        /**< duration job was executing            */
```
