

Moab

ERROR: server rejected request - could not authenticate client

Issue: Moab client commands on the server function properly, but return an authentication error on the login nodes.

Symptom:

```
[root@loginnode1 ~]# showq
ERROR: server rejected request - could not authenticate client
ERROR: remote server rejected request, message 'invalid key for client 'root' -
expecting key F...' (hostname:port=moab-headnode:42559)
```

Solution:

Make sure to copy \$MOABHOMEDIR/etc/.moab.key from the headnode to the same place on the login nodes.

Unique solution ID: #1042
