

# Moab

## How can I modify all array jobs submitted from TORQUE?

### Issue:

How can I modify all TORQUE array sub-jobs with mjobctl -m

### Symptom:

Submitting TORQUE jobs with qsub -t 1-10 will cause Moab to create individual jobs in Moab. I would like to modify all sub TORQUE array index values at once via Moab.

### Solution:

```
"mjobctl -m class="foo" x:1234*"
```

Unique solution ID: #1054
