

Moab

Moab client commands: /usr/lib64/libcrypto.so.10: no version information available (required by mdiag)

Issue: after upgrading Moab and Torque (to versions 8 and 5), all Moab client commands still execute successfully, but they also display a warning message like this:

mdiag: /usr/lib64/[libcrypto.so](#).10: no version information available (required by mdiag)

Solution: upgrade openssl-devel (e.g., with "yum update openssl-devel").

Unique solution ID: #1061
