

# Torque

## When using qsub -k what happens to the job output on the pbs\_mom?

**Issue:** When using qsub -k what happens to the job output on the pbs\_mom?

**Solution:**

With a -k the error and output are stored in /var/spool/torque/spool/ on the compute node for the duration of the job and then scp'd /cp'd back. This seemed to be the behavior even with \$usecp.
