

MWS

The db-migrate.js script has not yet been run.

Issue: When upgrading to a newer version the installer should run the db-migrate.js script. If it doesn't for some reason you will get errors like this in the mws logs:

```
2017-05-08T16:24:40.609-0400 localhost-startStop-1 ERROR
grails.app.conf.BootStrap    0          The db-migrate.js script has not yet been
run. Please see the upgrade section of the installation guide for instructions.
```

This is likely to happen if you have MWS and Mongo running on separate machines.

Solution: You can run the db-migrate.js script manually. You will need to find the script in /opt/mws/tools/. You should then copy it to the machine running Mongo. You can run the script with this syntax:

```
mongo -u mws_user mws db-migrate.js -p
