MWS

Why do I see "ALERT: Moab is configured to use Mongo, but no MONGOSERVER specified."?

Issue:

Why do I see "ALERT: Moab is configured to use Mongo, but no MONGOSERVER specified."?

Symptom:

When running mdiag -R -v you see the following message:

ALERT: Moab is configured to use Mongo, but no MONGOSERVER specified.

Solution:

Moab is able to export and import clusterstate, jobs and diagnosit information through Moab Web Services. Some sites may not take advantage of this but still see this ALERT. If your site does not use Moab Web Services you can safely ignore this ALERT as it has nothing to do with statistics or ODBC. Moab Web Services is a stand alone product and not needed for the scheduler to function.

For sites that have implemented Moab Web Services, (MWS), you will want to check the following on setting up MWS. Additionaly make sure that you have changed the default keys and have granted the moab user access to mongodb.
